

## Work Smarter With Premier Analytics & Consulting

The Intelitech Group is a research and advisory firm serving the ARM industry for over 20 years. Our work has empowered hundreds of organizations to work smarter using operational consulting, machine learning, and actionable data. We optimize work efforts, improve consumer reach, and avoid risk while evaluating and benchmarking performance.

Ultimate Analytics, especially designed for Ontario Systems users, will help your company increase collections, reduce costs and help aid in strategic data driven business decisions. It does this by focusing on four key areas: Data Enrichment, Account Segmentation, Workflow Automation, and Reporting.

You'll have a team of consultants assigned to your company to help you understand your data and assure your success.

We set ourselves apart from data providers in our applied analytics model, where we not only provide the right information but help you use it most effectively.

“ We were dialing the same accounts, given the same work effort, same letters, same notices, across our entire inventory, so when Intelitech did their data analysis and scrubbed our data and showed me that the bottom third of our business only represented 3% of our overall recoveries, it told me that we weren't maximizing our opportunities, nor were we really leveraging our staff to maximize the dollars based on the inventory that we had. We were throwing darts at the dartboard but weren't trying to hit the bullseye. We were just repeating our efforts but really weren't maximizing the results.

## Data Enrichment

We activate your data so it does the work for you. Smarter data means you can:

- Improve accuracy
- Minimize error
- Save time & operational costs

## Account Segmentation

We'll help you segment your inventory properly by placing focus on the accounts that are most valuable to your organization. This will help you:

- Improve consumer reach
- Focus on profitable accounts
- Improve productivity

## Workflow Automation

There are a number of ways we improve your workflow, some of those ways are through:

- Work strategies
- Account lifecycle intelligence
- Automation with message codes & scripting
- Ongoing consulting

## Reporting

We provide dozens of standard and custom reports tailored to your business needs. With reporting you can actually use, you can:

- Evaluate performance through trend analysis
- Evaluate your business processes
- Assist with everyday decision-making
- Identify risk situations
