

Monitoring Services

Reduce risk through bankruptcy, deceased, and litigious monitoring

Your business can avoid risk and wasted effort by identifying deceased, bankrupt and litigious consumers listed on your accounts. Our monitoring service finds new information and generates responses daily where your workflow automation can then take the appropriate action on these consumers' accounts.

When new information is found relating to a bankrupt, deceased, or litigious account, a response record is generated and returned to you for processing.

About Intelitech

The Intelitech Group has been a premiere analytics and consulting provider in the ARM industry for over 20 years. Our work has empowered hundreds of organizations to work smarter using operational consulting, machine learning, and actionable data. We optimize work efforts, improve consumer reach, and avoid risk while evaluating and benchmarking performance.

Bankruptcy

The bankruptcy services component of monitoring looks daily for any account in your assigned active inventory that has been included in a bankruptcy. It will notify you of this based on a combination of the following criteria:

- First and last name match
- Address match
- Social security match

Not only will you be notified of an active bankruptcy, but also the type of bankruptcy along with all the necessary data points to file a proof of claim when applicable.

Deceased

Monitoring portfolios for deceased accounts daily allows for early identification and less wasted effort. Deceased accounts are determined through combinations of:

- First and last name match
- Address match
- Social security match

The deceased information will allow you to identify which accounts need to be checked for an estate or probate service.

Litigious

Daily identify high-risk consumers that could have:

- Current lawsuits
- Past lawsuits

This is a risk mitigation tool that allows you to identify accounts likely to be litigious in nature.

Workflow Automation

Discuss with an Intelitech consultant to learn how to automate the care of bankrupt, deceased, and litigious accounts using message codes.
